

PHASE 5 • POCKETSMART AI

Project Development Phase

Building the working flow from user input to AI-generated recommendations.

Project Development Phase

PHASE PURPOSE

Development is where the PocketSmart concept becomes an application. The guide documents AI initialization, core functionality, backend routes, authentication, session features and a responsive frontend.

1 AI Integration

Configure Gemini 1.5 Flash Pro and validate text-only plus image + text interactions.

2 Planner APIs

Implement Home, Party and Jewelry recommendation routes.

3 Auth + Sessions

Registration, login, logout, JWT token, session metadata and personalized session data.

4 Frontend

Responsive planner forms and structured recommendation cards using HTML/CSS/Jinja2.

PROCESS SNAPSHOT

DEVELOPMENT MODULES

AI Service	Prompt orchestration, budget interpretation, domain segmentation and optional image analysis.
Backend	Planner endpoints, authentication/session routes, CORS and application startup.
Models	Structured input/output schemas support reliable interaction between frontend and backend.
Frontend	Separate planner experiences for Home, Party and Jewelry, connected to backend POST routes.

USER JOURNEY

- Open the PocketSmart AI interface.
- Choose a planning category.
- Enter budget and contextual preferences.
- Submit the request to the corresponding planner route.
- Receive structured AI-generated recommendations and review previous plans through history.

PHASE TAKEAWAY

Development connects the user interface, API routes, Gemini intelligence, authentication and recommendation presentation.

Source basis: uploaded PocketSmart AI reference guide. The guide documents the project's planners, architecture, workflow, milestones, development, testing and UI modules. The supplied YouTube link was not directly accessible in this environment, so no unsupported
