

PHASE 6 • POCKETSMART AI

Project Testing Phase

Proving that recommendations remain relevant, budget-aware, and usable in realistic situations.

Project Testing Phase

PHASE PURPOSE

Testing focuses on more than whether the code runs. The guide calls for real-world use cases across all three planners and checks response quality, budget adherence, platform accuracy, validation, and UI/UX.

1 Real-World Cases

Test varied budgets and preferences across Home, Party and Jewelry.

2 AI Quality

Evaluate contextual relevance and the usefulness of Gemini responses.

3 Budget Check

Verify that recommendations respect the user's stated financial limit.

4 Platform Check

Review whether recommendations align with intended sources/platforms.

5 UX Check

Confirm smooth interaction and responsive presentation.

6 Fallbacks

Provide default recommendations when AI results are insufficient.

PROCESS SNAPSHOT

TEST INPUT

AI RESPONSE

CHECK

REFINE

RETEST

TEST MATRIX

Home	Home décor setups using varied budgets and preferences; examples include IKEA/Amazon-oriented options.
Party	Food, venues and decoration combinations involving scenarios such as Swiggy/Zomato/OYO.
Jewelry	Occasion/style inputs and optional outfit images for coordinated jewelry suggestions.

OPTIMIZATION LOOP

- Refine AI prompt structures.
- Improve session handling.
- Add input validation for edge cases.
- Check UI/UX across devices.
- Add fallback/default recommendations where required.

PHASE TAKEAWAY

Testing turns real-world scenarios into a continuous quality loop of checking, refining and retesting.

Source basis: uploaded PocketSmart AI reference guide. The guide documents the project's planners, architecture, workflow, milestones, development, testing and UI modules. The supplied YouTube link was not directly accessible in this environment, so no unsupported video-specific claims were added.
