

PROJECT & TEAM DETAILS

Project Name: PocketSmart AI

College: Shri Krishnaswamy College for Women | College Code: UNM 1659

Team ID: SWTID-2026-2335 | Team Size: 4

Team Leader: Sowmiya A

Team Members: Siva Priya B • Sophia Sri S • Sri Lekha J

PHASE 1 • POCKETSMART AI

Brainstorming & Ideation Phase

Turning everyday budget problems into one smart AI planning assistant.

Brainstorming & Ideation Phase

PHASE PURPOSE

The ideation phase begins with a simple observation: people often know what they want, but not how to fit choices, preferences, and prices into one realistic budget. PocketSmart AI turns that pain point into a reusable AI assistant.

1 Problem

Too many choices, scattered platforms, uncertain prices, and difficulty balancing lifestyle goals with a fixed budget.

2 Big Idea

One assistant that understands budget + context + preferences and converts them into practical recommendations.

3 AI Advantage

Generative AI can interpret natural-language needs and, for jewelry, optional outfit images.

4 Three Domains

Home interiors, party planning, and jewelry selection share the same budget-aware recommendation concept.

PROCESS SNAPSHOT

SCENARIO LAB

HOME INTERIOR	Room type, quantities and budget → furniture, décor, lighting and related options.
PARTY PLANNER	Guest count, event type, venue and budget → food, venue and decoration suggestions.
JEWELRY PLANNER	Occasion, style, budget and optional outfit image → coordinated jewelry suggestions.

IDEATION DECISIONS

- Keep one common recommendation philosophy across all three domains.
- Use Gemini 1.5 Flash Pro as the multimodal intelligence layer.
- Make recommendations budget-aware rather than simply listing products.
- Support personalization through preferences, authentication, sessions, and history.

PHASE TAKEAWAY

The project idea is validated as one reusable budget-and-preference intelligence concept across three lifestyle domains.

Source basis: uploaded PocketSmart AI reference guide. The guide documents the project's planners, architecture, workflow, milestones, development, testing and UI modules. The supplied YouTube link was not directly accessible in this environment, so no unsupported video-specific claims were added.
