

PHASE 2 • POCKETSMART AI

Requirement Analysis Phase

Converting the idea into clear inputs, outputs, services, and quality expectations.

Requirement Analysis Phase

PHASE PURPOSE

Requirement analysis defines what PocketSmart AI must accept, process, return, and remember. The reference guide identifies planner-specific inputs, authentication, recommendation history, and validation needs.

1 Inputs

Budgets, preferences, quantities, event details, guest count, occasion and optional images.

2 Processing

Planner routes send structured context to the Gemini recommendation layer.

3 Outputs

Product/service suggestions with relevant details such as item information and prices.

4 User Services

Registration, login, logout, sessions, dashboard information and recommendation history.

FUNCTIONAL REQUIREMENTS

Home	Collect budget, room details, quantities and preferences; generate home/interior recommendations.
Party	Collect budget, guest count, event type and venue details; generate food, venue and decoration options.
Jewelry	Collect budget, occasion, style preferences and optional outfit image; generate matched jewelry options.
Authentication	Support registration, login, logout and protected/session-aware interaction.
History	Retrieve previous recommendation queries and results for review or reuse.

QUALITY REQUIREMENTS

- Check budget adherence and contextual relevance.
- Validate inputs and handle edge cases.
- Maintain a responsive and user-friendly interface.
- Provide fallback/default recommendations when AI output is insufficient.
- Check platform/source accuracy in real-world scenarios.

PHASE TAKEAWAY

The requirements define exactly what users provide, what PocketSmart processes, what it returns, and how quality is checked.

Source basis: uploaded PocketSmart AI reference guide. The guide documents the project's planners, architecture, workflow, milestones, development, testing and UI modules. The supplied YouTube link was not directly accessible in this environment, so no unsupported video-specific claims were added.
