

PHASE 7 • POCKETSMART AI

Project Documentation Phase

Turning the implementation into a clear technical story that others can understand and maintain

Project Documentation Phase

PHASE PURPOSE

Documentation captures the architecture, technologies, routes, milestones, UI modules, testing strategy and final purpose of PocketSmart AI. It becomes the project's memory.

1Architecture

Frontend → backend → Gemini AI → platform-oriented recommendation sources.

2Technology

FastAPI/Flask references, Gemini 1.5 Flash Pro, HTML/CSS, JavaScript/Jinja2 and session/auth components.

3API Map

Planner, authentication, session, recommendation-details, history and startup routes.

4UI Map

Home, testimonials, register, login, dashboard, planners, recommendation pages and history.

PROCESS SNAPSHOT

ARCHITECTURE → MODULES → ROUTES → UI → TEST NOTES

WHAT TO DOCUMENT

Architecture	Explain how the interface, backend, AI layer and external sources interact.
Routes	Record planner endpoints, authentication routes, session routes, history and startup.
UI	Describe each major page and the user's path through the application.
Testing	Record real-world cases, budget checks, AI quality checks, platform checks and fallback behavior.

DOCUMENTATION VALUE

- Supports project presentation and evaluation.
- Helps future developers understand module responsibilities.
- Creates traceability from requirements to implementation.
- Provides a reliable reference for future improvements.

PHASE TAKEAWAY

Documentation preserves the project's architecture, modules, routes, UI and quality strategy for future use.

Source basis: uploaded PocketSmart AI reference guide. The guide documents the project's planners, architecture, workflow, milestones, development, testing and UI modules. The supplied YouTube link was not directly accessible in this environment, so no unsupported video-specific claims were added.
